

MTH209 Assignment 9, IIT Kanpur

Consider minimizing the function $f(x) = (x - 3)^2$.

Starting from 0 and 4 as the two values of the vertices, write down three steps of the Nelder-Mead algorithm:

1. Step 1: $\theta_1 = \underline{\hspace{2cm}}$, $\theta_2 = \underline{\hspace{2cm}}$
2. Step 2: $\theta_1 = \underline{\hspace{2cm}}$, $\theta_2 = \underline{\hspace{2cm}}$
3. Step 3: $\theta_1 = \underline{\hspace{2cm}}$, $\theta_2 = \underline{\hspace{2cm}}$
