

Selection Process, Techniques, and Instruments

- **Validity** – The degree to which the data predicts the candidate's success as a manager.
- **Reliability** – The accuracy and consistency of the instrument.
- **Interviews** – structured, semi-structured, unstructured.
- **Tests**
 - Intelligence
 - Proficiency and aptitude
 - Vocational tests
 - Personality – (Myers- Briggs Type Indicator) – Introversion/extraversion, sensing/intuition, thinking/feeling, judging/perceiving.

Performance Appraisal and Career Strategy

- Subjective vs objective rating.
- The Appraisal Process

- Sample questions for appraising managers as managers

Planning

- Does the manager set for the department both short and long term goals in verifiable terms that are related in a positive way to those of the superiors and the company?
- In choosing from alternatives, does the manager recognize and give primary attention to those factors that are limiting or critical to the solution of a problem?
- Does the manager check plans periodically to see if they are still consistent with current expectations?

Organizing

- Does the manager delegate authority to subordinates on the basis of results expected of them?
- Does the manager refrain from making decisions in that area once authority has been delegated to subordinates?
- Does the manager regularly teach subordinates or otherwise make sure that they understand the nature of line and staff relationships?

A Team Evaluation Approach

- The appraisal process involves the person being evaluated and consists of the following steps:
- Selection of job-related criteria.
- Development of examples of observable behaviour.
- Selection of four to eight raters (peers, associates, other supervisors, and the immediate superior).
- Preparation of rating forms applicable to the job
- Completion of the forms by the raters.
- Integration of the various ratings.
- Analysis of the results and preparation of the report.

Rewards and Stress of Managing

Rewards

- AT GE workers get paid for performance – “vitality curve” – 20-70-10.
- Rewards should be timely.
- Increase in salary can hardly ever be reversed.

Stress

- It is an adaptive response, mediated by individual differences and/or psychological processes, which is a consequence of any external action, situation, or event that places excessive psychological and/or physical demands on a person.

Formulating the Career Strategy

1. Preparation of a personal profile.
2. Development of long-range personal and professional goals.
3. Analysis of the environment: Threats and Opportunities.
4. Analysis of personal Strengths and Weaknesses.
5. Development of strategic career alternatives.
6. Consistency testing and strategic choices.
7. Development of short-range career objectives and action plans.
8. Development of contingency plans.
9. Implementation of the career plan.
10. Build a professional development plan.

Leading

Motivation

- Motivation – A general term applying to the entire class of drives, desires, needs, wishes, and similar forces.
- Content Theories – “What” Motivates Individuals
 - Hierarchy of needs
 - Herzberg’s two factor theories
 - Alderfer’s ERG theory
 - McClelland’s needs theory
- Process Theories – “how” motivation occurs
 - Expectancy theory (vroom)
 - Equity Theory
 - Goal-setting theory
 - Reinforcement theory

Maslow's Hierarchy of Needs Theory

Maslow's needs theory – When one set of needs is satisfied, this kind of need ceases to be a motivator.

- **Psychological needs** – needs for sustaining human life, such as food, water, warmth, shelter, sleep. Until these needs are satisfied to a degree necessary to maintain life, other needs will not motivate people.
- **Security and Safety needs** – People want to be free of physical danger and fear of losing a job, property, food, or shelter.
- **Affiliation or acceptance needs** – since people are social beings, they need to belong, to be accepted by others.
- **Esteem needs** – Once people begin to satisfy their need to belong, they tend to want to be held in esteem both by themselves and by others. This kind of need produces satisfactions such as power, prestige, status, and self-confidence.
- **Need for Self-actualization** – Maslow regards this as the highest need in his hierarchy. It is the desire to become what one is capable of becoming – to maximize one's potential and to accomplish something.

Alderfer's ERG theory

Alderfer's ERG theory – people are motivated by existence, relatedness, and growth needs.

- **Existence needs** – similar to Maslow's basic needs.
- **Relatedness needs** – pertaining to satisfactorily relating to others.
- **Growth needs** – referring to self-development, creativity, growth, and competence.
- “Frustration and regression” – When higher level needs are not satisfied, individuals regress to lower needs.
- Individual may begin at any level.
- All three levels must be satisfied for individuals to feel motivated.

Herzberg's Motivation-Hygiene Theory

Herzberg's two-factor theory

- Motivators (Satisfiers) –
 - achievement, recognition, challenging work, advancement, and growth in the job.
 - Their existence will yield feelings of satisfaction or no satisfaction (not dissatisfaction).
- Hygiene factors (Dissatisfiers) -
 - things such as company policy and administration, supervision, working conditions, interpersonal relations, salary, status, job security, and personal life.

Maslow's Needs Hierarchy	Herzberg's Two-factor Theory	
Self-actualization	Motivators	Challenging work, growth in job, achievement, responsibility, advancement, recognition
Esteem and Status		
Affiliation or acceptance	Hygiene factors	Status, interpersonal relations, quality of supervision, company policy and administration, working conditions, job security, salary.
Security or safety		
Psychological needs		

- The first group of factors (the dissatisfiers) will not motivate people in an organization; yet they must be present or dissatisfaction will arise.
- The second job content factors were found to be the real motivators because they have the potential of yielding a satisfaction.
- The tendency of people to attribute good results to their own efforts and to blame others for poor results is thought to have prejudiced Herzberg's findings – **"attribution bias."**

McClelland's Needs Theory of Motivation

McClelland's needs theory – the basic motivating needs are the need for power, the need for affiliation, and the need for achievement.

- **Need for power** – people with high need for power have a great concern with exercising influence and control. Such individuals generally are **seeking positions of leadership**; they are frequently **good conversationalists**, though often **argumentative**; they are **forceful, outspoken, hardheaded, and demanding**; and they **enjoy teaching and public speaking**.
- **Need for affiliation** – these people usually derive pleasure from being loved and tend to avoid the pain of being rejected by a social group. As individuals, they are likely to be concerned with maintaining **pleasant social relationships**, they enjoy a **sense of intimacy and understanding**, to be ready to **console and help others in trouble**, and to **enjoy in friendly interactions** with others.
- **Need for achievement** – these people have an **intense desire for success** and an **equal intense fear of failure**. They want to be challenged and **they set moderately difficult (but not impossible) goals for themselves**. They take a realistic approach to risk; they are not likely to be gamblers, but rather **prefer to analyze and assess problems, assume personal responsibility for getting a job done, and like specific and prompt feedback on how they are doing**. They tend to be **restless, like to work long hours, do not worry unduly about failure if it does occur, and tend to like to run their own shows**.

The expectancy theory of motivation

- **Vroom's expectancy theory** – People will be motivated to do things to reach a goal if they believe in the worth of that goal and if they can see that what they do will help them in achieving it.
- People's motivation towards doing anything will be determined by the value they place on the outcome of their effort (whether positive or negative) multiplied by the confidence they have that their effort will materially aid in achieving a goal.
- **Force (Motivation) = Expectancy X Instrumentality X Valance**

Force – strength of a person's motivation.

Expectancy – probability that a particular action will lead to a desired outcome.

Instrumentality – strength of relationship between performance behaviour and desired outcome.

Valence – strength of an individual's preference for an outcome.

Equity Theory

- **Equity theory** – motivation is influenced by an individual's subjective judgement about the fairness of the reward he or she gets relative to the inputs, compared with the rewards of others.
- **$(\text{outcomes by a person}) / (\text{Inputs by a person}) = (\text{outcomes by another person}) / (\text{Inputs by another person})$**
- If people feel they are inequitably rewarded, they may be dissatisfied, they may reduce the quantity or quality of output, or they may even leave the organization.
- If people perceive the rewards as equitable, they probably will continue at the same level of output.
- If people think the rewards are greater than what is considered equitable, they may work harder. It is also possible that some may discount the rewards.

Goal Setting Theory of Motivation

- Motivated from the MBO ideology
- For objectives to be meaningful, they must be clear, attainable, and verifiable.
- Clear goals, if accepted are motivating.
- People want to know what is expected of them.
- However, several conditions must be met, including that the objectives must be verifiable, which means that at the end of the period one must be able to measure whether the objectives have been achieved and to what extent.

Skinner's Reinforcement Theory

- **Positive reinforcement or behaviour modification** – Individuals can be motivated by proper design of their work environment and by praise for their performance, while punishment for poor performance produces negative results.
- Skinner and his followers do far more than praise good performance. They analyse the work situation to determine what causes workers to act the way they do, and then they initiate changes to eliminate troublesome areas and obstructions to performance.
- Specific goals are then set with workers participation and assistance, prompt and regular feedback of results is made available, and performance improvements are rewarded with recognition and praise.
- Even when performance does not equal goals, ways are found to help people and praise them for the good things they do.
- It has also been found useful and motivating to give people full information on a company's problems, especially those in which they are involved.

Special Motivational Techniques

What motivational techniques can managers use?

Money

- Money in the form of wages, piecework, incentive pay, bonuses, stock options, company-paid insurance, or any other thing given to people for performance, is important.
- Money is often more than monetary value; it can also mean **status or power** or other things.
- Money is more important to **people who are raising a family**, than to people who have “arrived.”
- In organizations, money is used as **a means of keeping an organization adequately staffed** and **not primarily as a motivator**.
- Money as a motivator tends to be dulled somewhat by the practice of **making the salaries of the various managers in a company reasonably similar**.
- Money to be effective motivator, people in various positions, even though at a similar level, must be given **salaries and bonuses that reflect their individual performance**.
- Money can motivate only when the **prospective payment is large relative to a person's income**. Many wage and salary increases are not large enough to motivate the receiver.
